- **Content:** This course focuses on the methods to automatically transform data into a visual context in different formats – charts, graphs, dashboards and dynamic web pages. Students will study how to design, develop the effective and interactive visualization tools to analyze the data from files, database, and various data sources as well as learn how to use popular visualization software.
- **Textbook:** [Interactive Data Visualization for the Web, 2nd Edition](#). Scott Murray, O'Reilly Press, 2017. ([Online](#)) [Code examples available on GitHub](#). ISBN-10: 9781491921289, ISBN-13: 978-1491921289
- **References:** See the first day slides.
- **Objectives:** Upon completion of this course, students will be able to:
  - A. Explain the key techniques and theory used in visualization, including data models, graphical perception and techniques for visual encoding and interaction.
  - B. Present information in an understandable, effective, and aesthetic manner, for the purposes of explaining ideas and analyzing data.
  - C. Analyze, evaluate and automate information visualizations and other forms of visual presentation.
  - D. Utilize popular visualization API and software
  - E. Design and develop interactive web pages and tools that allows user to visualize and interact with data from the database.
- **Course grading:** 1 Midterm (20%), 2 study presentations (10%, 10%), 2 projects and presentations (30%, 30%)

**Class Policies:**

- **This is a hands-on course. Students are required to bring personal laptop every class.**
- Instructional Methods: lecture with slides, student presentations, class discussions and exercises, and project creations.
